

Six AI specialists run a controlled trial on a virtual copy of your machine

Say what you want to test. The Lab designs the experiment, runs baseline vs intervention on a physics twin, does the statistics, and hands you an auditable report. It never touches the plant.

WHAT IT DOES

- **A team, not a model:** understand → design → simulate → optimise → analyse → report — you can see which specialist produced every number.
- **Honest about the physics:** physics engine first, causal model second, analytic estimate last — and the tier used is always disclosed.
- **Real statistics:** p-value, effect size, confidence interval, and which factors drove the result — with provenance on every figure.
- **Read-only by design:** the Lab simulates and advises; Ryekronix can commission it, and it reports back.

MEASURED, NOT DESCRIBED — EVERY FIGURE CARRIES ITS STATUS

100% on-premises

runs on your hardware

ATTESTED
